A SNAP-ON® EXCLUSIVE!

There is no better tool available to fill the large cooling systems found in large trucks.

How is this tool better?

BETTER IN FOUR IMPORTANT WAYS:

1. New vacuum generator creates a higher vacuum more quickly. Not only is it faster, air volume remaining in the system is less than one quarter competitive units would leave giving the most complete fill possible.
2. Bottom connect gauge allows the tech to read the gauge from the shop floor and not have to climb on top of the vehicle or on a ladder to see it.
3. Larger coolant refill valve, increased passage diameters and larger hose and screen allows the tool to move coolant more efficiently.
4. Longer intake hose to accommodate the height of large trucks.

The bottom line: A faster, more complete fill. It saves the technician time which saves him money and the job is done right the first time.

The most profitable application for this tool, the Coolant Barrier, is changing thermostat, temperature sensors or freeze plugs on large trucks where a lot of new coolant can be saved.

This is easily accomplished requiring little operator skill. The tool can do much more but there is a significant learning curve.

Large trucks often have two cooling system caps: an accessible non-pressure relieving cap and pressure relieving cap that will leak under vacuum.

A "Vacuum Holding Adapter" may be necessary to refill. These adapters replace the pressure relieving cap and have an automatic safety pressure relief system.
